

A4 Transport provides specialised haulage capabilities tailored to moving heavy construction machinery, industrial equipment, and plant assets safely and efficiently.

Specialised Fleet & Handling Capabilities

- **Crane-Assisted Transport (HIAB):** Self-loading and offloading capabilities for site-bound machinery, containers, and oversized equipment where static on-site cranes are unavailable.
- **Heavy Haulage Fleet:** Low-loader and articulated vehicle setups equipped to handle heavy, wide, or non-standard payloads, including excavators, telehandlers, generators, and industrial units.

Key Service Advantages

- **Site-to-Site Relocation:** Direct transfer of heavy plant equipment between construction sites, depots, or customer locations without delay.
- **Qualified Operators:** Highly trained drivers certified in CSCS and ALLMI standards, ensuring safety compliance during complex loading, unloading, and rigging processes.
- **Tailored Logistics:** Strategic route planning and vehicle matching to handle weight limits, access constraints, and tight site schedules.
